PROPERTY WALKTHROUGH AND SNOW PLACEMENT

Before finalizing the bid and before the first service, the vendor must walk the property with the Property Management Team. Review drive aisles, parking areas, gate access, common area entry doors, sidewalks, walkways, drainage and existing site conditions. Agree on and document the service areas, priority access routes and approved locations for pushing and storing snow on a marked site map.

Snow piles must not block storage unit doors, common area doors, gates, customer parking, pedestrian routes, fire lanes, hydrants, drains or visibility at entrances. Avoid placing snow where meltwater will refreeze across access routes. Obtain management approval before changing snow placement or performing relocation or haul-away services.

WALKTHROUGH DATE

MYPLACE REPRESENTATIVE

DESCRIPTION OF SNOW REMOVAL SERVICES

General snow removal

1. Begin plowing when accumulation reaches 2 inches and return after each additional 3 inches during ongoing storms, unless a different schedule is approved in writing by MyPlace. Overnight snowfall must be cleared by 9:30 AM; snowfall between 6:00 AM and 4:00 PM must receive initial service within six hours of reaching the trigger.
2. Service below 2 inches and ice treatment are performed as requested by the Property Management Team. Coordinate any pretreatment with management and document the application.
3. Clear drive aisles, parking areas, main access points and access to stored vehicles. Use designated snow removal gates where available. Push snow only to approved locations.
4. For snowfall of 8 inches or more, clear snow from in front of tenant unit doors and building doors in addition to drive aisles. Identify any additional tenant door clearing charge in General Rate Comments. Common area door clearing is priced separately in Option A.
5. Use salt or an approved salt and sand mixture on asphalt. Use calcium chloride or a comparable approved deicer on concrete; do not use sodium chloride or rock salt on sidewalks or other concrete surfaces.

Sidewalks, loading areas and emergency access

6. Clear all agreed sidewalks, walkways, loading areas and common area entry doors each time the property is plowed. Maintain full agreed walkway width and enough clearance for doors to open and close.
7. Keep emergency exit doors and fire lanes unobstructed. Maintain at least 2 feet of clear space around hydrants, or greater clearance as directed by MyPlace.
8. Apply the approved concrete-safe deicer to sidewalks, walkways and entryways after clearing and as needed for freezing conditions.

Coordination and service requirements

9. Complete the property walkthrough by November 15, or before the first service if awarded later. Record existing damage and show snow piles and any equipment storage on a site plan signed by the Property Management Team.
10. Obtain written Regional Manager approval for offsite snow removal, charges outside the agreed scope, and additional charges for snowfall exceeding 12 inches in 24 hours. Keep emergency access clear while coordinating the response.
11. Provide a W-9, certificate of insurance, equipment list and after-hours contact information. Confirm the service agreement and selected pricing program before starting work.
12. Notify the Property Management Team promptly of weather delays or property damage. Protect buildings, gates, bollards, signs, landscaping, pavement and drainage; the contractor is responsible for damage caused by its equipment or materials.
13. Keep records of arrival and completion times, measured snowfall, service areas and deicer applications. Submit itemized invoices within 30 days of service. Proposals must remain valid for 60 days.

STATEMENT OF CHARGES

Vendors may quote Option A, Option B, or both. All prices must include applicable tax, labor, equipment and materials unless an exclusion is expressly identified. MyPlace will confirm the selected program before work begins.

Option A — À la carte pricing

I. Base contract items. Enter the price per push or clearing visit for the complete agreed service area in each depth tier. Depth is accumulation since the previous service; for the first visit, measure the current accumulation. Repeat visits are separately billable at the applicable tier.

Service	Below 2 in	2 to <5 in	5 to <8 in	8 to <12 in	12 in and up
A. Snow plowing	$	$	$	$	$
B. Sidewalks and walkways	$	$	$	$	$
C. Common area entry doors	$	$	$	$	$

Below 2 inches requires management request. State any 12-inch-and-above hourly rate or depth surcharge in General Rate Comments. No duplicate billing for bundled services.

II. Per application items

Service	Price	Billing basis
A. Salt or salt and sand on drive aisles	$	Per application
B. Calcium chloride or approved deicer on sidewalks and walkways	$	Per application
C. Dump truck for approved hauling	$	Per hour
D. Loader for approved relocation	$	Per hour

If snow depth is disputed, MyPlace and the vendor will use mutually agreed local snowfall records, together with the service log, to resolve the billed depth.

Option B — Flat-rate seasonal service

Quote a flat rate inclusive of plowing, common area door clearing, sidewalks, drive aisle treatment, walkway deicer, and snow relocation or hauling. Identify any excluded service or cap below.
